

Small Diameter N-12[®] Pipe and Fittings

New line of pipe and fittings results in a water-tight or soil-tight HDPE piping system from 4" through 60".

Completing the HDPE system

Until now, specifiers have been forced to switch to other materials in pipe diameters under 15" to get soil- or water-tight performance. And, until now, the most commonly specified material for small-diameter drainage has been SDR-35 PVC pipe.

Now, ADS offers you a new line of 4" through 12" N-12[®] pipe and injection molded fittings* for maximum integrity in drainage service. This means that all the economy and performance benefits you've come to trust in polyethylene pipe can now be enjoyed in a complete 4" through 60" system.

The advantages of polyethylene

The superiority of HDPE over metal and concrete pipe has been well documented in the lab and in the field. But polyethylene also has some significant benefits over PVC pipe in smaller diameter applications:

- **Better impact strength.** HDPE is less brittle than PVC, particularly in cooler temperatures. N-12 survives the impact of rocks in the backfill and the rigors of cold weather handling.

* Injection molded fittings are not compatible with single wall corrugated HDPE pipe.

- **No edge beveling.** N-12 pipe installs more quickly because there is no need to bevel the pipe edge when making the joint.

- **No special adapters.** With an all-polyethylene system, there is no requirement for special adapter fittings to join N-12 pipe to other materials.

- **Better chemical and abrasion resistance.** HDPE is virtually unaffected by acidic and alkaline solutions as well as by soil hydrocarbons.

Applications

The new line of small diameter pipe and fittings makes possible a complete drainage system from the top of the building to the storm sewer.

- Roof drains
- Foundation lines
- Collector pipe
- Roadway edge drains
- Construction site dewatering

Complete product selection

ADS offers a full complement of injection molded fittings (not welded fabrications) in 4" through 12" sizes. These fittings are available in both water-tight models which include an F477 gasket for attaching to the spigot end of the pipe, and soil-tight styles with cleats in the bells of the fittings.

The complete line, with item numbers, sizes, and the fabricated fittings they replace, is shown on page 2. *Some Reducers, Tees and Wyes require a two-piece field assembly. These are described on page 3.*

Injection Molded Fittings Selection

WATER-TIGHT FITTINGS

(Includes F477 gasket for attachment on pipe end)

SOIL-TIGHT FITTINGS

(Cleated bells)

* Shipped as two injection molded fittings. See page 3.

** 12" x 10" Tees and Wyes require about 15" of 12" N-12 pipe to join the injection molded fittings. See page 3.

Reducing Fittings

Some of the injection molded Reducers, Tees and Wyes require field assembly of two parts, as shown in the table below.

Fitting (Bell/Bell)	Water-Tight Fittings		Soil-Tight Fittings	
	Item No.	Consists of:	Item No.	Consists of:
